

WinTokenMon (v0.1.0-beta)

Internal Beta Testing User Guide

Welcome and thank you for participating in the **WinTokenMon** internal beta testing program! WinTokenMon is an open-source Windows desktop application that monitors your daily AI coding token usage (Antigravity CLI, Cursor, Claude Code, Codex, GitHub Copilot) in real-time, gamifying your workflow into an interactive, animated Pokémon companion that roams, reacts, hatches, and evolves on your desktop. This guide walks you through the core features to test and how to report feedback.

1. Getting Started (Quick Start)

WinTokenMon is distributed as a **Single-File Standalone Portable Executable (.exe)** — *no Python, Git, or extra dependencies required!*

- **Step 1:** Copy WinTokenMon-v0.1.0-beta-Portable.exe (~28 MB) to any folder on your PC (e.g. Desktop or Tools folder).
- **Step 2:** Double-click the .exe file to launch.
- **Step 3 (Important):** Because this is a fresh pre-release build without a commercial code signing certificate, Windows SmartScreen may present a blue prompt saying 'Windows protected your PC'. Simply click **More info** and then click **Run anyway**.
- **Step 4:** Within 1–2 seconds, your Pokémon companion / Egg will appear floating smoothly on your desktop without any black console window!

100% Local Privacy Guarantee: WinTokenMon only inspects local token count numbers from your installed CLI logs. Your codebases, prompts, git repositories, and API keys are **NEVER** read or transmitted over the network.

2. Testing Checklist & Core Features

Please take a few minutes to explore the following interactions during your testing session:

Feature Area	Action / Interaction	Expected Behavior
Pet Interaction	Left-click the Pokémon on your desktop	Pet performs a joyful spring hop, triggers emojis (🐾, 🐾, 🐾), and plays official audio cries.
Dragging	Click and drag the pet across the screen	Pet smoothly moves to new coordinates and persists position on next launch.
Auto-Roaming	Leave pet idle for a few seconds	Pet walks autonomously with realistic step-hops, 50ms frame cadence, and footstep dust puffs 🌫️.
System Tray	Right-click the Pokéball tray icon by the clock	Context menu opens: Open Dashboard, Force Refresh, Toggle Roaming, Snap Taskbar, Exit.
Dashboard	Open Dashboard (double-click tray icon)	Adaptive Rarity theme, 7-day token history bar chart, and Pokédex live search/filters.
Shop & Items	Buy / Feed a Rare Candy 🍬 in Shop	Grants +100M EXP instantly to active companion and plays 8-bit Level-Up fanfare chime.
AI Tracking	Use Cursor / Antigravity / Claude Code	Within 10 seconds of turn completion, token counters increment and EXP bar fills.

3. Frequently Asked Questions & Troubleshooting

Q: Why didn't my token counter update instantly while typing?

A: WinTokenMon reads disk logs written upon turn completion by your AI tool. The background sweep occurs every 10 seconds with 0% CPU consumption. Counters update immediately on the next sweep after your tool flushes logs.

Q: Pet is hidden behind exclusive 3D games?

A: DirectX / Vulkan games running in *Exclusive Fullscreen* mode bypass desktop window managers. To keep your Pokémon companion visible while gaming or coding, switch your game display setting to **Borderless Windowed** mode.

Q: Where is my companion progress and save data stored?

A: All game progress is saved in %APPDATA%\WinTokenMon\state.json. Your companion, level, tokens, and inventory remain safe even if you move or update the executable file.

Q: If I experience a crash or error, what should I check?

A: Look for a debug.log file in the folder where you launched the executable. You can copy the traceback message into the feedback form!

4. Submitting Your Feedback

After testing the application during your daily coding workflow, please take 3 minutes to fill out the Google Form feedback survey provided by the developer.

- **Stability:** Report whether the app launched smoothly and if any crashes or freezes occurred.
- **Accuracy:** Verify whether your active AI coding tools were detected properly.
- **Visual & Audio UX:** Share your thoughts on pet size presets, step-hop cadence, and sound effects.
- **Feature Wishlist:** Vote for upcoming roadmap items (Achievements, Desktop Feeding Minigame, LAN Battles)!

***Thank you for your valuable support!** Your feedback directly shapes upcoming releases and ensures WinTokenMon delivers the best possible companion experience for developers. Happy coding! ■■*
